

STEP-BY-STEP GUIDE

Patch your profile

Turn your GitHub profile into a live, self-updating README: a moving wave header, stats and streak cards, a contribution heatmap, a 3D contribution universe, your projects and Connect buttons, in light and dark versions.

`readme-glassfolio.in`

1. Create your profile repository
2. Create a token
3. Make your README
4. Publish
5. Check your profile

Turn your GitHub profile into a live, self-updating README in about ten minutes: a moving wave header, stats and streak cards, a contribution heatmap, a 3D contribution universe, your projects and Connect buttons, in light and dark versions that follow each visitor's GitHub theme.

Website: readme-glassfolio.in

You need:

- a GitHub account,
- a public repository named exactly like your username (step 1),
- a fine-grained token that can write to that one repository (steps 2 to 8).

Everything runs in your browser. The token is sent only to GitHub and is never stored.

Part 1: Create your profile repository

STEP 1 Create `your-username/your-username`

On GitHub, click **+ → New repository**. Name it exactly like your username. GitHub confirms it's the *special* repository that shows on your profile. Set it to **Public** and switch **Add README** on, then click **Create repository**.

Create a new repository

Repositories contain a project's files and version history. Have a project elsewhere? [Import a repository](#).
Required fields are marked with an asterisk (*).

1 General

Owner * DevopsNimbus / Repository name * DevopsNimbus
✓ DevopsNimbus is available.

ⓘ DevopsNimbus/DevopsNimbus is a ✨ *special* ✨ repository that you can use to add a README to your GitHub profile. Make sure it's public and initialize it with a README to get started.

Great repository names are short and memorable. How about [cautious-adventure](#)?

Description
0 / 350 characters

2 Configuration

Choose visibility * Public
Choose who can see and commit to this repository

Add README
READMEs can be used as longer descriptions. [About READMEs](#) On

Add .gitignore
.gitignore tells git which files not to track. [About ignoring files](#) No .gitignore

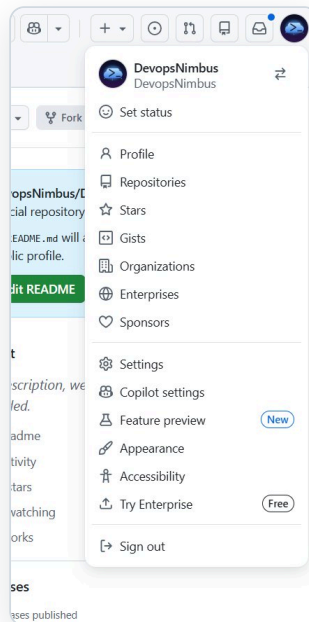

Create a new repository named like your username, public, with a README

Part 2: Create a token

The website needs permission to commit the README, the images and the daily-update workflows to your profile repository. A fine-grained token limited to that one repository is the safest way to give it.

STEP 2 Open Settings

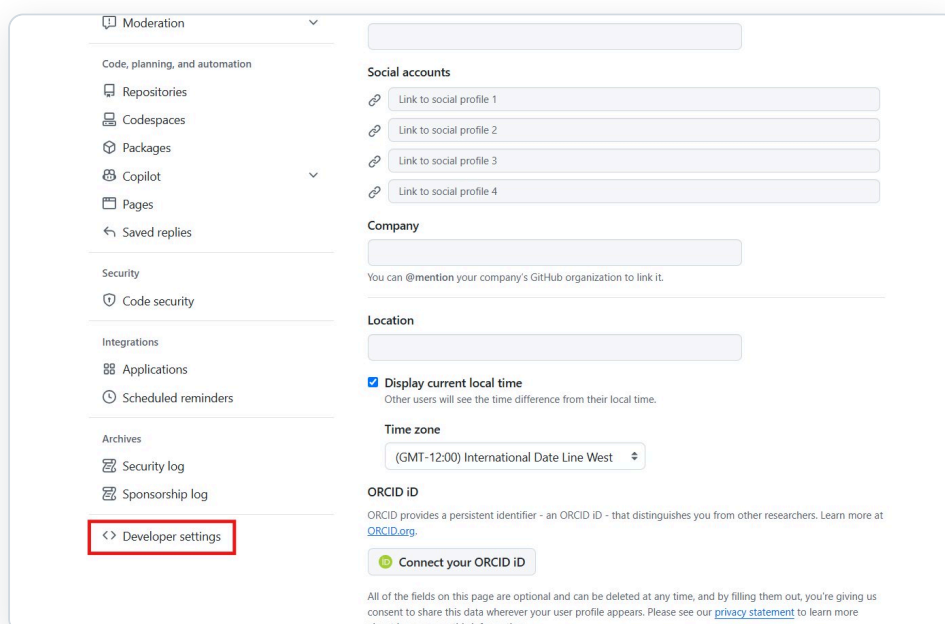

Click your avatar (top right) and choose **Settings**.

Profile menu with Settings

STEP 3 Open Developer settings

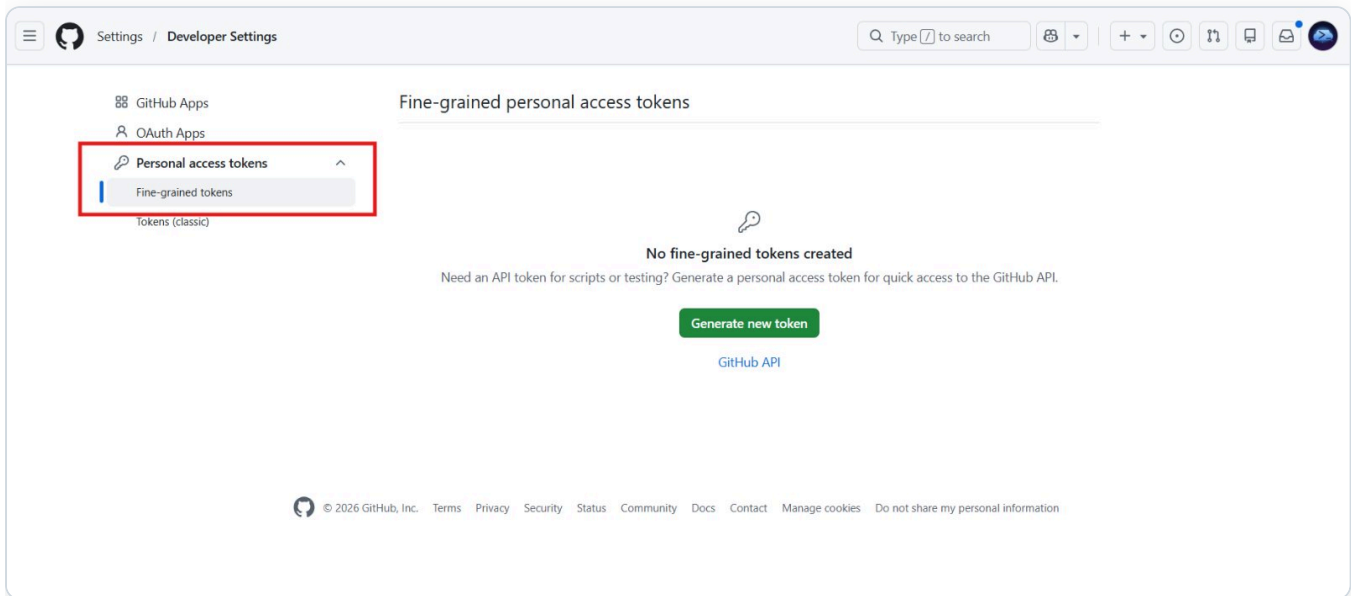

Scroll to the bottom of the left menu and click **Developer settings**.

Developer settings at the bottom of the Settings menu

STEP 4 Fine-grained tokens

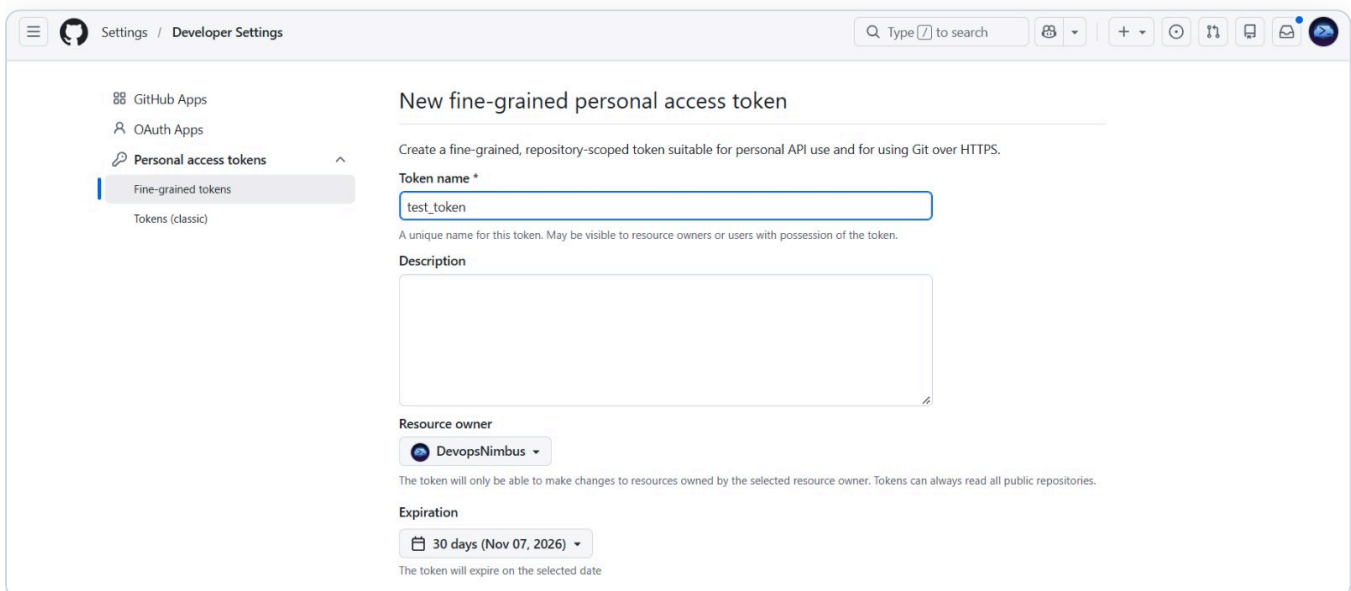

Open **Personal access tokens** → **Fine-grained tokens** and click **Generate new token**.

Fine-grained tokens page with Generate new token

STEP 5 Name it and pick an expiry

Give the token a name you'll recognise (for example `profile-readme`), keep **Resource owner** as your own account, and choose an expiry. You only need the token when you publish from the website; the daily updates use GitHub's own temporary token, so an expired token doesn't stop them.

New fine-grained token: name, resource owner and expiry

STEP 6**Only your profile repository**

Under **Repository access**, choose **Only select repositories** and tick **your-username/your-username**.

Repository access

☐ **Public repositories**
Read-only access to public repositories.

☐ **All repositories**
This applies to all current and future repositories you own. Also includes public repositories (read-only).

☒ **Only select repositories**
Select at least one repository. Max 50 repositories. Also includes public repositories (read-only).

Select repositories 1

Select repositories

Search

☒ ☐ DevopsNimbus/DevopsNimbus
no description

Repository access: only the profile repository selected

STEP 7**Contents and Workflows: Read and write**

Under **Permissions**, click **Add permissions** and set:

Permission	Access	Why
Contents	Read and write	Commit the README, banner and cards
Workflows	Read and write	Add the daily-update workflows in <code>.github/workflows/</code>
Metadata	Read-only	Added by GitHub automatically

Nothing else is needed. Then click **Generate token**.

Permissions: Contents and Workflows read and write, Metadata read-only

Without **Workflows: Read and write**, your README and cards are still published, but the daily updates are left out and the website tells you exactly what to add. You can edit the token's permissions later; you don't need a new one.

STEP 8**Copy the token**

Copy the token now: GitHub shows it only once. Keep it private and don't paste it anywhere except the website.

Fine-grained personal access tokens

Generate new token

These are fine-grained, repository-scoped tokens suitable for personal [API](#) use and for using Git over HTTPS.

 **test_token**
Never used • Expires on Sat, Nov 7 2026

Delete

 **Make sure to copy your personal access token now as you will not be able to see this again.**

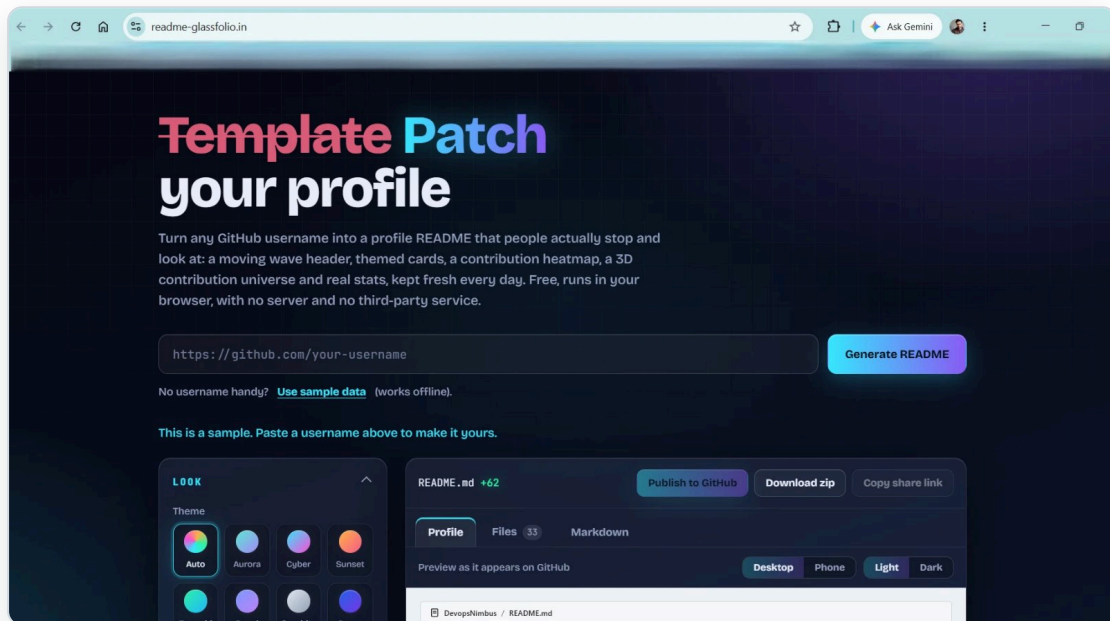

Copy

Copy the new token (shown once)

Part 3: Make your README

STEP 9 Open the website

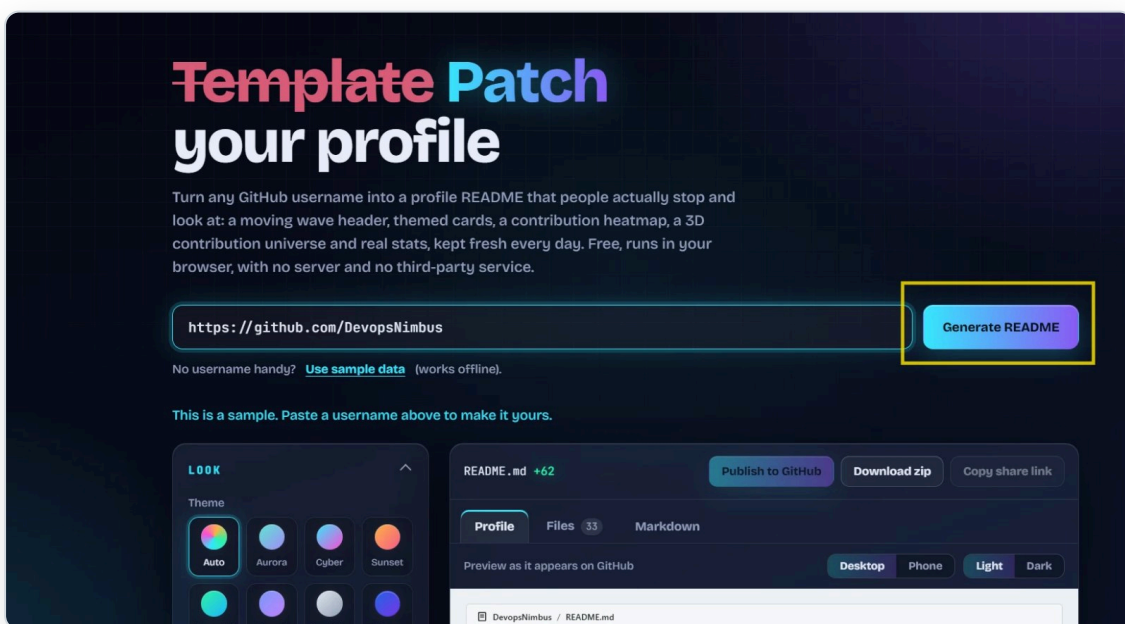

Go to readme-glassfolio.in. You'll see a sample profile straight away; it's replaced by yours in the next step.

The website with the sample profile

STEP 10 Enter your GitHub link and generate

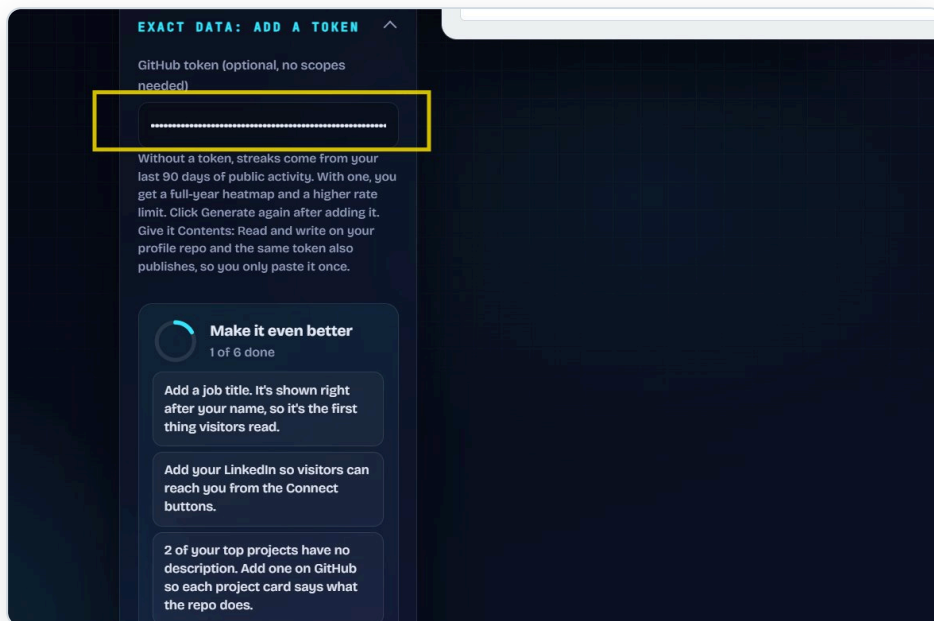

Paste your profile link (for example `https://github.com/your-username`) or just your username, and click **Generate README**.

Enter your profile link and click Generate README

STEP 11 (OPTIONAL)**Exact data**

Open **Exact data: add a token** and paste the same token, then click **Generate README** again. With a token the heatmap and streaks cover the **past year** instead of the last 90 days of public activity. The same token is then also used for publishing, so you only paste it once.

Exact data: the token field

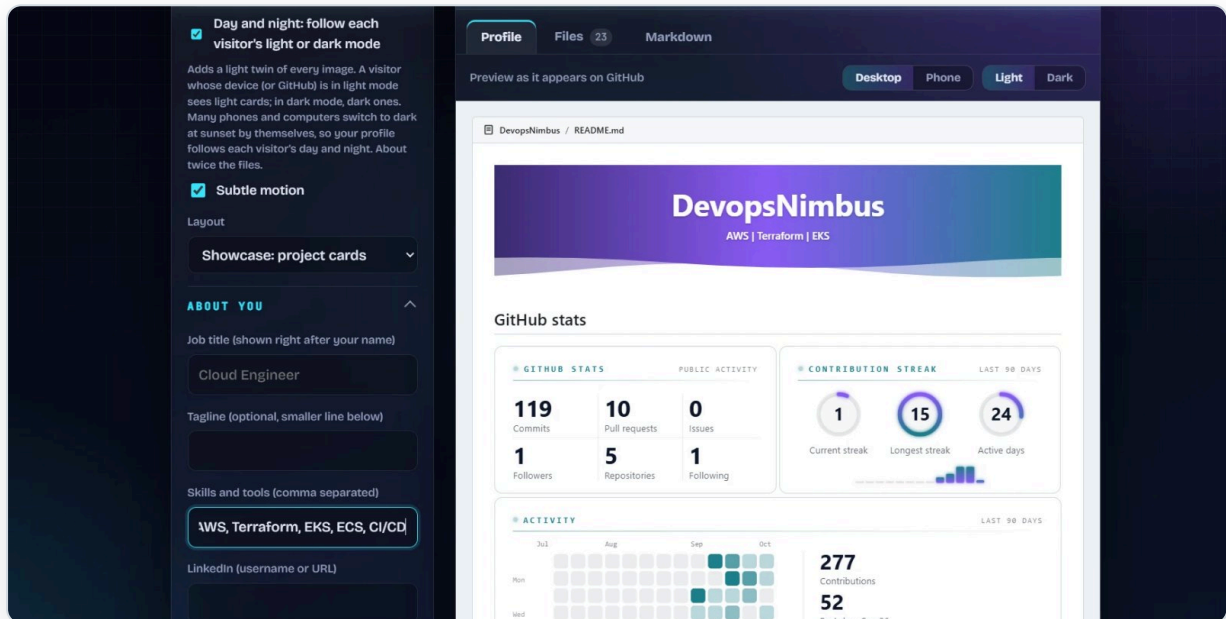

STEP 12

About you

Fill in what you'd like visitors to read first:

- **Job title:** shown right after your name.
- **Tagline:** a smaller line under it.
- **Skills and tools:** comma separated; the first ones also appear in the header.
- **LinkedIn:** adds a LinkedIn button to Connect.

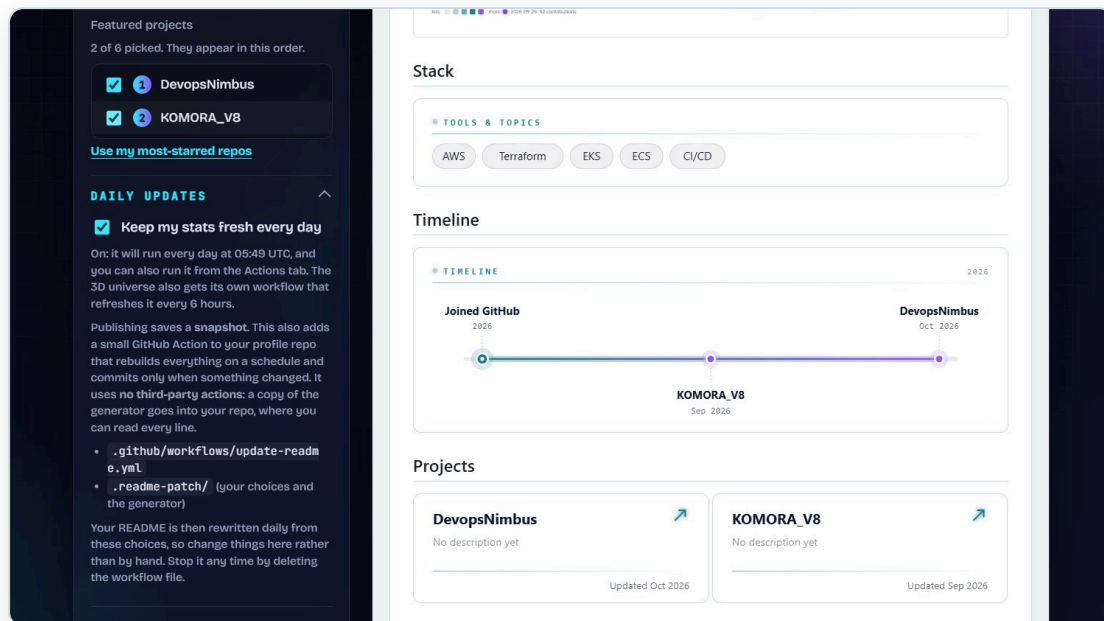

Pick a **Theme** (or *Custom* with your own two colours). The preview on the right updates as you type, and the **Light / Dark** switch shows both versions.

About you: job title, tagline, skills and LinkedIn

STEP 13 Featured projects and daily updates

Choose which repositories appear as project cards, in the order you tick them (or keep your most-starred ones). Leave **Keep my stats fresh every day** ticked: it adds the workflows that refresh your profile automatically.

Featured projects and Keep my stats fresh every day

STEP 14 Sections

Tick or untick any section.

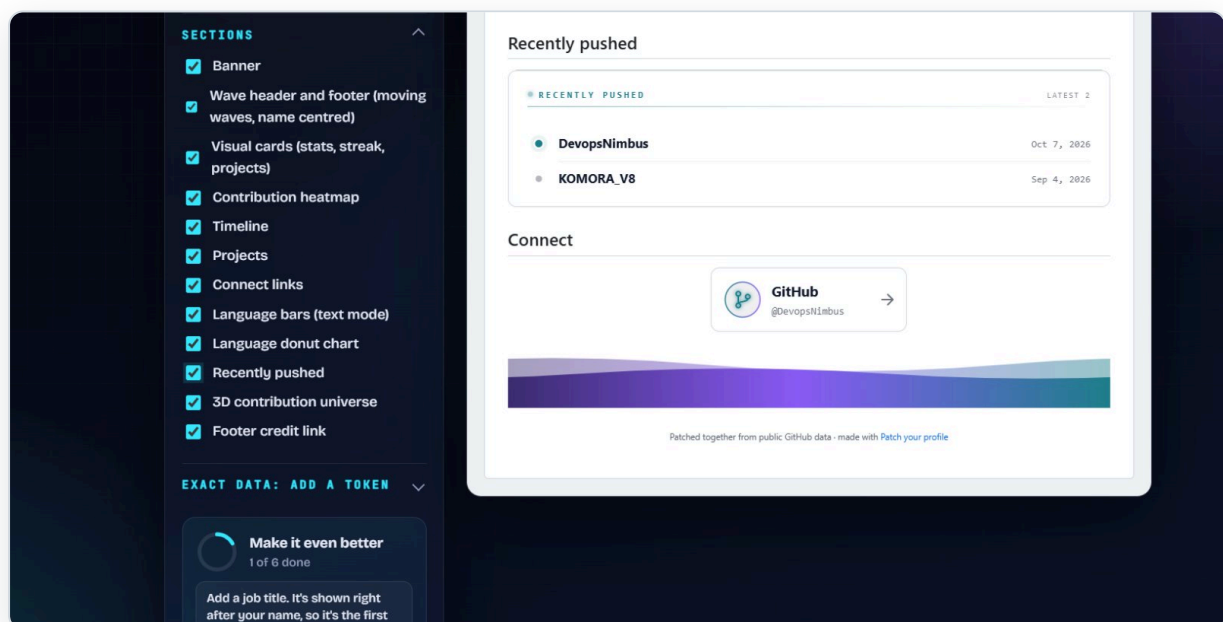

On by default:

- **Wave header and footer:** the moving gradient header and footer (untick for the orbit banner and a plain footer).
- **Visual cards:** stats, streak and projects as cards (untick for a text-only README).
- **Contribution heatmap, Timeline, Projects, Connect links.**
- **3D contribution universe:** your year as a 3D pie of month wedges with your repos orbiting it as planets, plus a small upright pie of your contribution mix (commits, pull requests, issues and code review). Under it, **Universe colours** picks *Cosmic* (Git3D Universe's own look, the default) or *Match my theme*.
- **Footer credit link.**

Off by default, tick to add:

- **Recently pushed:** your latest pushed repositories.
- **Language donut chart:** repos by language, inside the Languages card.

The **Make it even better** box lists quick wins (a job title, a LinkedIn link, repository descriptions); click a tip to jump to the field that fixes it.

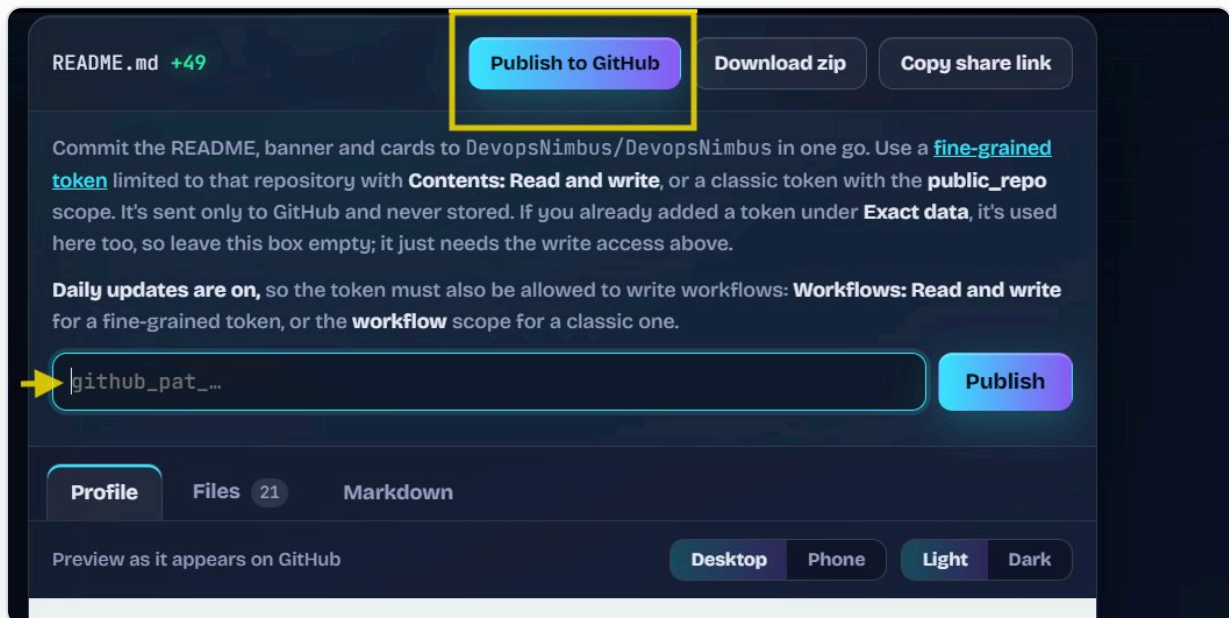

Sections checklist and the wave footer in the preview

Part 4: Publish

STEP 15 Open the Publish panel

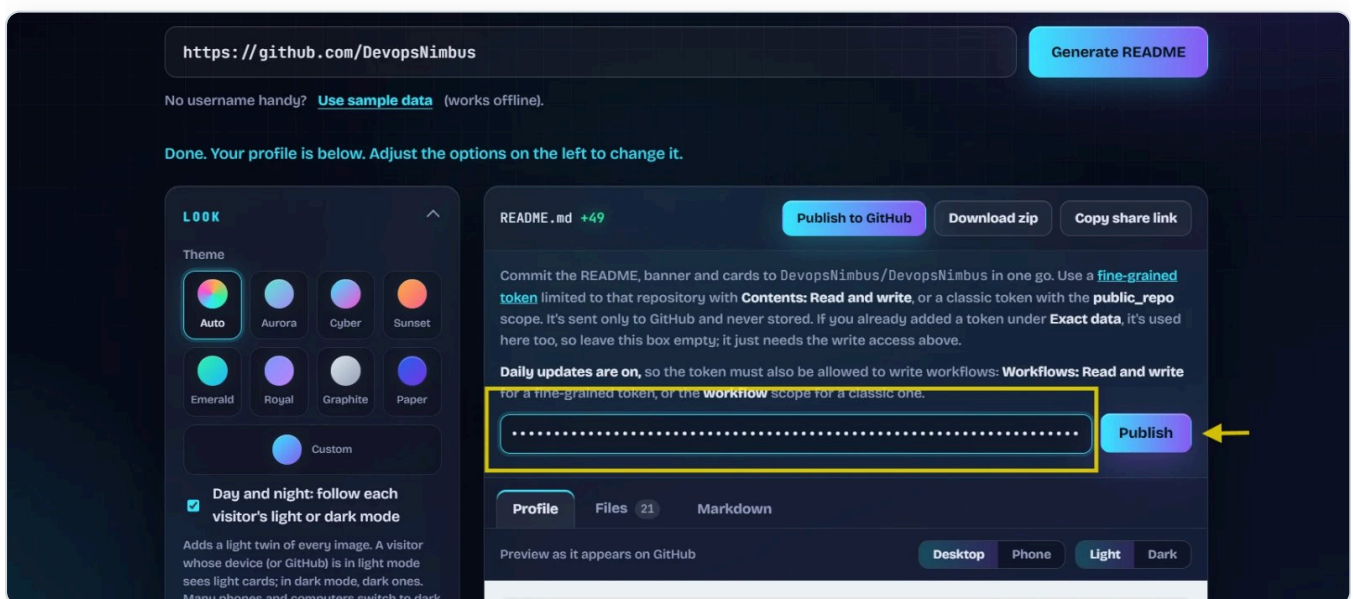

Click **Publish to GitHub**. The panel says which repository it will commit to and which permissions the token needs.

Publish to GitHub opens the publish panel

STEP 16 Paste the token and publish

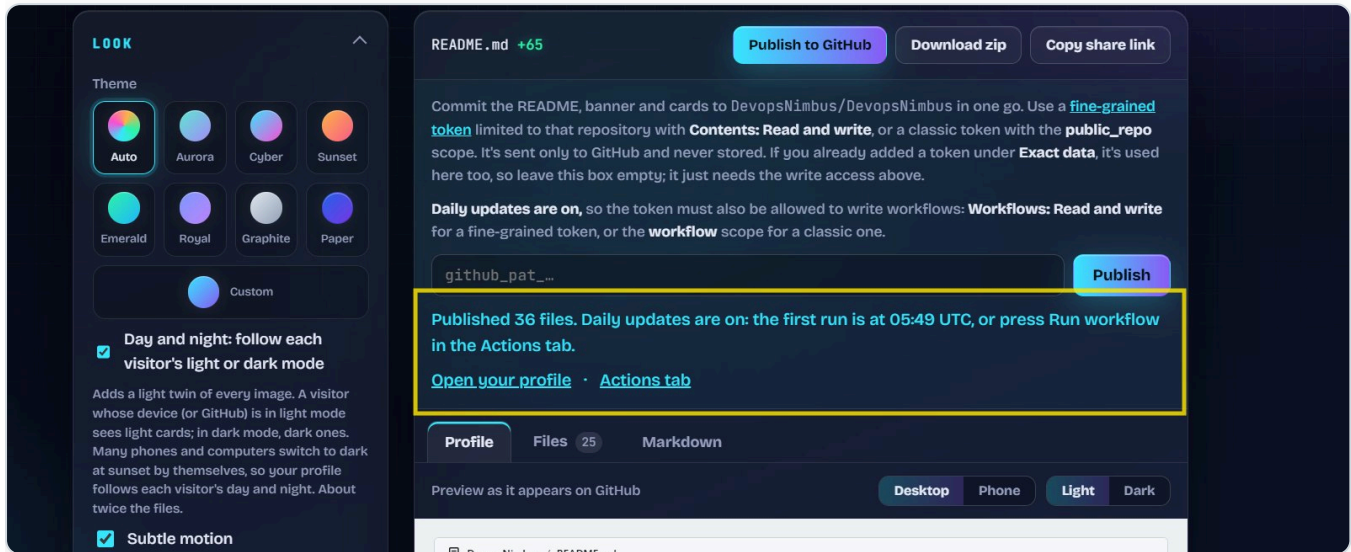

Paste your token and click **Publish**. If you already added it under *Exact data* (step 11), you can leave this box empty.

Paste the token and click Publish

STEP 17 Done

You'll see **Published N files** and the time of your first daily run, with links to your profile and to the Actions tab.

Published: the success message with links to the profile and the Actions tab

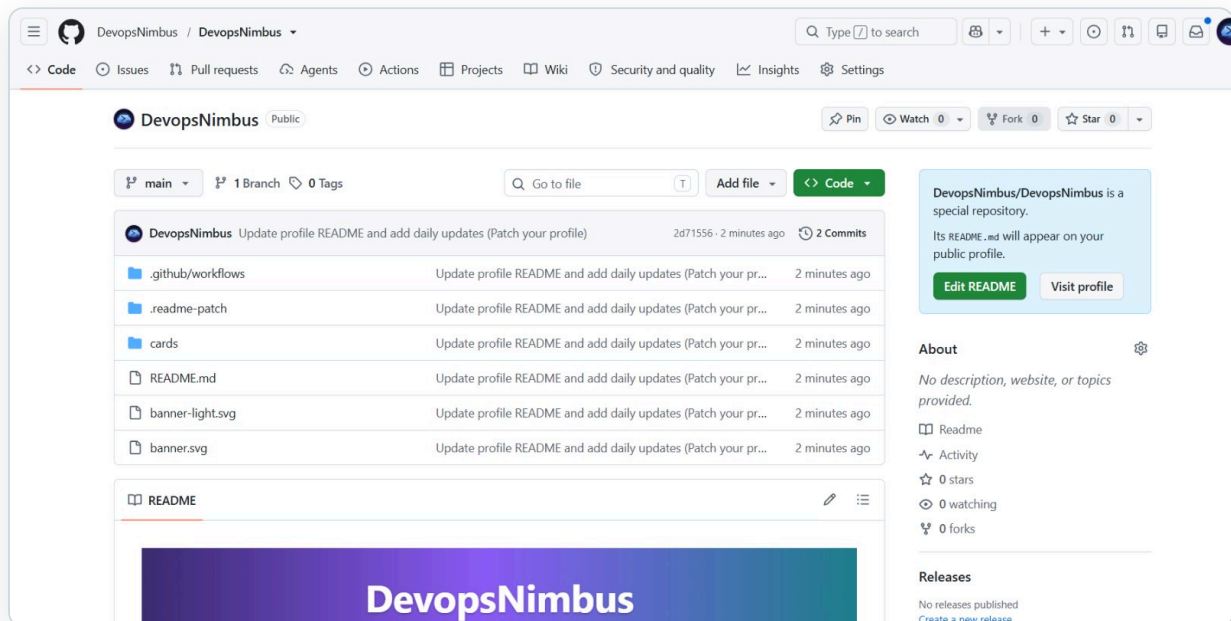

If it says **Daily updates were NOT added**, the token is missing *Workflows: Read and write* (step 7). Your README is live anyway; fix the token and publish again to add the daily updates.

Part 5: Check your profile

STEP 18 Your profile repository

Your repository now contains:

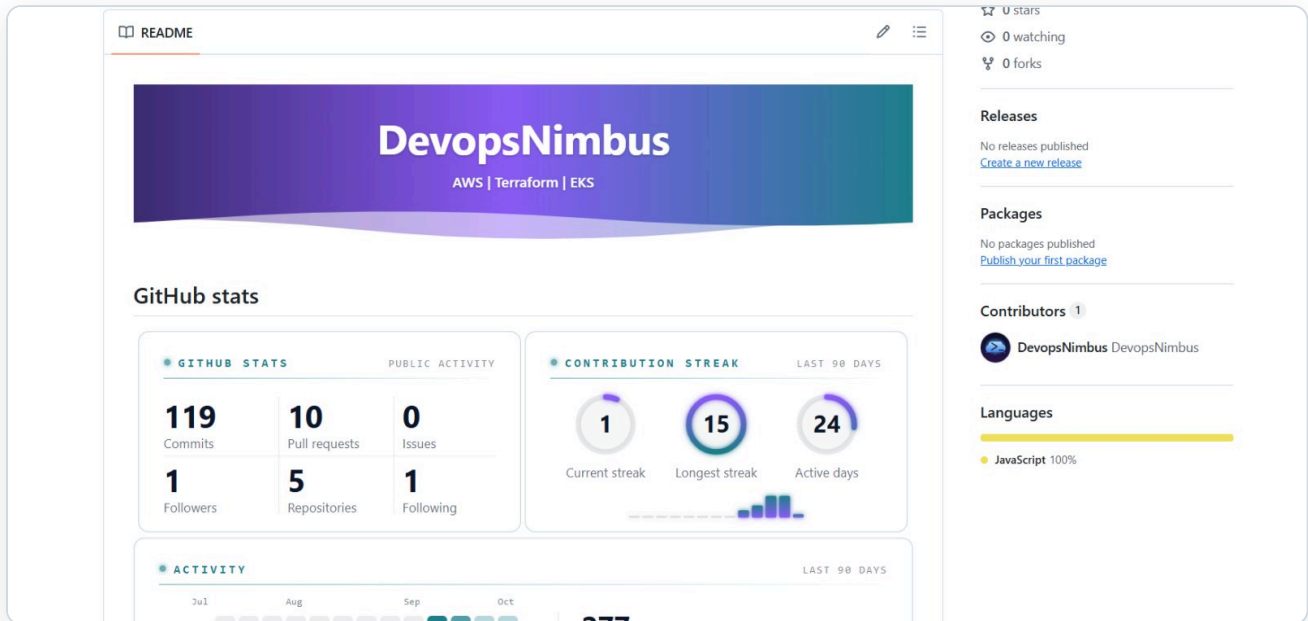

- `README.md` , `banner.svg` , `banner-light.svg` and a `cards/` folder: the profile and its images, in a dark and a light version.
- `.github/workflows/update-readme.yml` : rebuilds everything **once a day**.
- `.github/workflows/update-universe.yml` : refreshes the 3D universe **every 6 hours**.
- `.readme-patch/` : your saved choices (`config.json`) and the generator the workflows run.

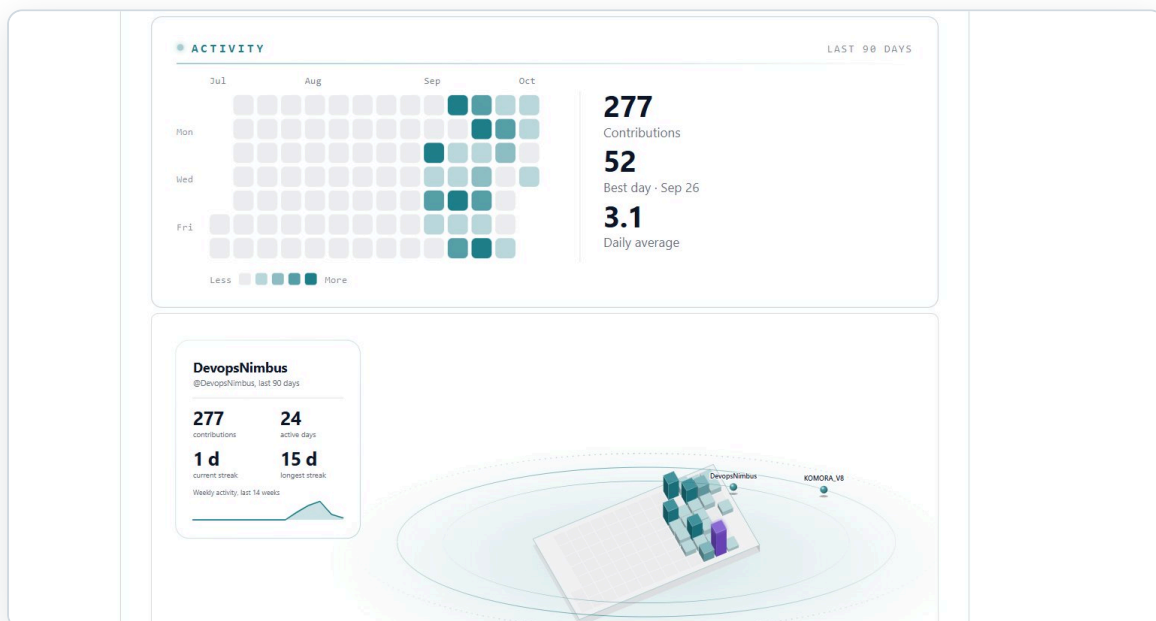

The profile repository after publishing

Your profile

Open your profile (or the repository's README). Visitors on GitHub's light theme see the light version and visitors on the dark theme see the dark one.

The published profile: wave header and GitHub stats

The published profile: contribution heatmap and 3D universe

Run the daily update now (optional)

Open your repository's **Actions** tab, choose **Update profile README** and click **Run workflow** to see it work without waiting for the scheduled time. A successful run makes an **Update profile stats** commit when your numbers have changed.

Change something later

Open the website again, generate with your username, change the options and publish again. The daily workflows always use your latest choices. Don't edit `README.md` or the images by hand: the next daily run rebuilds them from your choices.

Troubleshooting

What you see	What to do
Daily updates were NOT added	Give the token Workflows: Read and write (step 7) and publish again. The message names what's missing for your token.
The token can't write to this repository	The token needs Contents: Read and write on <code>your-username/your-username</code> , and the repository must be in its <i>Repository access</i> list (step 6).
Create a public repository named ...	Create the profile repository first (step 1). It must be public and named exactly like your username.
GitHub's rate limit is used up	Wait a little, or add your token under <i>Exact data</i> (step 11).
The website looks like an older version	Press Ctrl+Shift+R (Cmd+Shift+R on a Mac). The page also reloads itself when a newer version has been deployed.
The profile still shows old images	GitHub caches images for a few minutes. Wait, then refresh the profile.
The daily workflow stopped	GitHub pauses scheduled workflows in a public repository after 60 days without activity. Re-enable it in the Actions tab.

To stop the daily updates, delete the two files in `.github/workflows/` or disable them in the Actions tab. Your README stays as it is.
